

Kardex Stow Storage Solutions

The high quality storage systems
for all palletized goods, small goods
and long items.

VALUE IN RACKING

Kardex Stow, as one of the leading suppliers of storage solutions, aims to supply added value in warehouse racking and shelving. Over the past 30 years, we have focused on high quality yet affordable equipment, and flexible system solutions.

Kardex Stow is an international company with three production plants, affiliated companies and an extensive distributor network. As part of the Kardex Group, we are able to provide for your needs in more than 30 countries – with the know-how of over 2,000 employees worldwide and customized, creative engineering.

PALLETIZED GOODS STORAGE

The wide range of frames allows your rack construction to be optimized for heights of up to 40 metres and bay loads of up to 45 tonnes.

PAL RACK® CONVENTIONAL PALLET RACKING

The Pal Rack® pallet racking system is modular and can be easily adjusted to your needs.

MOBILE RACKING

Our mobile racking system is composed of conventional pallet racking installed on mobile bases. This unique setup allows aisles to be opened and closed as required. It enables compact storage while keeping the stored products accessible (as in cold stores and freezers).

STOWATLAS® SHUTTLE SYSTEM

The Kardex Stow Shuttle is a deep lane storage and retrieval system. It is a carrier used to move pallets within a specifically designed racking structure, thus optimizing to a maximum the storage capacity.

DRIVE-IN RACKING

Our drive-in racks increase your storage space considerably. They eliminate picking aisles and are ideal for storing large quantities of similar pallets. The system provides safe block stacking for goods that are too fragile to be stacked directly on top of each other.

PALLET LIVE STORAGE

Our pallet live storage system provides efficient and ultra dense storage of palletized goods with fewer aisles. This increases your storage capacity considerably.

CUSTOMIZED RACKING

In order to find the best storage solutions based on standard components, a customized racking design is developed by our engineering department.

OPEN FACE RACKING

Our open face racking is particularly suitable for the storage of containers and pallets. As box containers are only supported at the four corners, safe storage in conventional pallet racking is not possible. With open face racking the containers or pallets are stored on side supports, which slide into slots on the frames.

HIGH BAY RACKING

The high-bay racking system is operated by crane and automates your warehouse to the highest degree possible.

ACCESSORIES

We supply all the accessories you need in order to protect your racks and material handling infrastructure.

CLAD RACK

Kardex Stow offer a full range of clad rack buildings from 20 to 50 m height, including single-deep, double-deep and multi-deep, as well as satellite solutions.

SMALL GOODS RACKING

We offer a wide range of flexible storage solutions for small goods. Our systems are designed for almost any situation and environment – from offices to industrial warehousing, for light and heavy loads.

MIDI RACK® LONG SPAN RACKING

The fully adjustable Midi Rack® long-span racking system is a good solution for storage of hand-loaded, light to medium-heavy products.

STOWSHELF® SHELVING SYSTEM

The Stowshelf® shelving system can be applied in any environment, from offices to industrial warehousing. It is designed for light to medium-heavy loads.

MULTI TIER RACKING

Kardex Stow offer intelligent industrial flooring systems. Both the Stowshelf® shelving system and Midi Rack® can be equipped with flooring and stairs to create multi tier racking applications.

HIGH RISE SHELVING

The Midi Rack® long-span racking and the Stowshelf® shelving system are suitable for free-standing, high-rise installations served by order-picking trucks.

MINILOAD SINGLE -STORE

The automated storage and retrieval systems (AS/RS) type "mini load single store" are used for storage of small goods, mostly totes or cartons. The goods are handled automatically by unmanned AS/RS cranes. The cranes, guided at both top and bottom, retrieve the totes from their location and drop them at the picking location, or deliver them directly onto the picking conveyor.

MINILOAD MULTI-STORE

A "beam" type automated storage and retrieval system, the mini load multi store system is most commonly used for storing cartons and totes in large quantities. It is used for AS/RS handling devices equipped with side grips or an extracting mechanism, pulling out cartons or totes from the front or back. The totes may be stored as singles or double deep, depending on the technique used and the required system throughput.

LONG ITEMS RACKING

KANTI-STOW® CANTI LEVER RACKING

The cantilever racking system is ideal for storing long, irregular and mixed loads.

MEZZA-STOW® MEZZANINE FLOORING CONSTRUCTIONS

The Mezza-Stow® system has been developed for the construction of system floors or in combination with highbay warehouses.
